

The Seam Grabber (SG) Guardrail System is BlueWater Mfg's newest fall protection solution for standing seam roofs. The base plate incorporates all three styles of our Architectural Series Railings, the PermaLine Warning Line System and our SafetyRail 2000 System.

The SG Guardrail System utilizes S-5! clamps to connect to the standing seams. When assembled, this guardrail system provides mandated worker protection for ladder egress/ingress and roof edge fall protection.

The Galvanized Base Plate is manufactured to fit various types of standing seam roofs. Use the SG Guardrail System to protect workers at mechanicals, ladder areas, roof hatches or create a full perimeter around the rooftop. All projects include a CAD layout which makes installation simple.

KEY FEATURES

- ▶ Meets and exceeds OSHA regulations
- ▶ Hot Dipped Galvanized Finish
- ▶ 3 styles of Architectural Railings available
- ▶ Use with SafetyRail 2000 Railings
- ▶ Use with our PermaLine Warning Line System.
- ▶ Utilizes S-5! Clamps
